Software Engineer (SDE-1)

SUMMARY

Software Engineer with end-to-end ownership of a fintech platform's backend, web, and mobile surfaces — architecting subscription billing and financial systems, debugging production issues, and shipping REST APIs consumed across Next.js and React Native clients.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Backend: Node.js, Express.js, REST APIs, WebSockets, MongoDB

Frontend & Mobile: React.js, Next.js, React Native (Expo), Redux Toolkit, Tailwind CSS

Payments & Integrations: Razorpay, Setu BBPS, Cloudinary, Fast2SMS, Gemini API

Security & Performance: JWT, Helmet.js, Rate Limiting, CORS, Query Optimization

Tools & Cloud: Git, GitHub, Postman, AWS EC2, Vercel, EAS / Play Console, BullMQ, Redis

EXPERIENCE

Solar Capital

Apr 2026 – Present

Software Development Engineer I (SDE-1) — End-to-End Platform Ownership

- Designed a subscription lifecycle state machine and Razorpay Subscriptions billing engine backed by a dedicated charge ledger; debugged and redesigned the webhook pipeline for flexible-tenure plans and the lifecycle processor to fix accrual and duplicate-snapshot bugs — running across both web and mobile clients.
- Owned backend architecture and a production React Native (Expo) app for the same platform end-to-end, building REST APIs consumed by both the Next.js web frontend and the mobile client.
- Debugged and resolved a production OTA incident caused by an empty environment variable in an EAS release bundle — fixed via `--environment`-based config injection and hardened runtime-version policy from `fingerprint` to an explicit string to prevent recurrence.
- Designed a configurable discount engine across the stack (schema, service layer, admin routes, frontend validation, webhook integration), favoring auditable admin-controlled flows over automated complexity.
- Built a gamified rewards mini-game engine with separate subscriber/non-subscriber outcome tables, wired to backend eligibility rules.
- Built React Native screens using Reanimated worklets — a home screen with a bottom-sheet-rise scroll effect, and a channel-partner CTA screen with a badge/lanyard entrance animation — alongside REST APIs shared with the Next.js web frontend.

Solar Capital

Jun 2025 – Mar 2026

Backend Developer Intern — Foundational Platform Build

- Designed and built the backend from scratch for a platform now serving 2,000+ users — REST API architecture for payments, subscriptions, rewards, and analytics.
- Implemented Razorpay Orders for a solar reservation flow, processing 500+ successful payments, and extended integration across channel-partner workflows.
- Integrated Setu BBPS for bill payments and built scheduled jobs automating reconciliation and daily reward allocation for 250+ subscribers.
- Built production-grade OTP authentication (Fast2SMS) with token rotation, and shipped the platform's first user dashboards for subscriptions and rewards.

PROJECTS

NextStep — AI-Powered Career Roadmap Platform — *React.js, Node.js, Express, MongoDB, D3.js, Gemini API, Firebase*

- Designed a full-stack roadmap-generation platform where the Gemini API converts user inputs into personalized learning paths; built stateful progress-tracking REST APIs with Firebase Auth/Firestore-backed session persistence.

CodeionX — Real-Time Collaborative Coding Platform — *Next.js, Node.js, Express, WebSockets, MongoDB, Gemini API*

- Architected a real-time collaborative code-execution platform with WebSocket-based isolated multi-user rooms, MongoDB aggregation pipelines for live leaderboard ranking, and Gemini-API-generated DSA challenges.

EDUCATION

B.Tech in Computer Science & Engineering

Jul 2023 – Jun 2026

Sir Chhotu Ram Institute of Engineering and Technology, Meerut
