Software Engineer

SUMMARY

Software Engineer with production experience owning features end-to-end across backend, web, and mobile in a fast-moving fintech environment — from design through implementation, testing, and production operation.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Backend: Node.js, Express.js, REST APIs, WebSockets

Databases: MongoDB, Firebase Firestore, MySQL

Frontend & Mobile: React.js, Next.js, React Native (Expo), Tailwind CSS

Payments & Integrations: Razorpay, Setu BBPS, Cloudinary, Fast2SMS, Gemini API

Caching & Background Processing: Redis, BullMQ, Node-Cron

Systems & Tools: Linux, Git, GitHub, Postman, Vercel, EAS, Play Console

EXPERIENCE

Solar Capital

Apr 2026 – Present

Software Development Engineer I (SDE-1)

- Designed and implemented the platform's recurring-payment architecture using Razorpay Subscriptions, introducing subscription lifecycle management, charge tracking, webhook-driven state transitions, payment-failure handling, and reconciliation for the planned monthly-payment model.
- Built automated background processing for payment reconciliation, daily reward allocation, webhook retries, and stale-record cleanup, ensuring recurring financial and user-state workflows were processed without manual intervention.
- Built and enhanced user-facing product experiences across investment dashboards, rewards, profile management, and reservation calculators, translating business rules and financial calculations into interactive, validated frontend workflows.
- Designed and implemented a gamified Grid Bonus engine with weighted reward outcomes, subscriber/non-subscriber eligibility rules, cooldown enforcement, and subscription-aware reward expiry, including lazy expiration and lifecycle handling for earned, expired, and immediately-resolved rewards.
- Implemented API security middleware including rate limiting, centralized input validation, JWT/token verification, Helmet.js security headers, CORS configuration, and protected route handling.

Solar Capital

Jun 2025 – Mar 2026

Backend Developer Intern

- Built the initial backend foundation for a platform serving 2,000+ users, covering solar-capacity reservations, payment processing, user dashboards, rewards, analytics, and administrative workflows.
- Implemented the complete solar-reservation payment workflow with Razorpay, including order creation, payment verification, booking-state updates, and failure handling; processed 500+ successful payments.
- Integrated Setu BBPS into the platform's bill-payment workflow, including provider communication, webhook handling, reconciliation, and scheduled processing for 250+ subscribers.
- Built the authentication and user-account foundation, including OTP-based login, token management, protected APIs, and the subscription/rewards services consumed by the application.
- Developed integrations for channel-partner operations and cloud media management, extending the backend beyond the core consumer application.

PROJECTS

NextStep — AI-Powered Career Roadmap Platform ([Live Demo](#)) — *React.js, Node.js, Express, MongoDB, D3.js, Gemini API, Firebase*

- Designed a full-stack roadmap-generation platform where the Gemini API converts user inputs into personalized learning paths; built stateful progress-tracking REST APIs with Firebase Auth/Firestore-backed session persistence.

CodeionX — Real-Time Collaborative Coding Platform ([Live Demo](#)) — *Next.js, Node.js, Express, WebSockets, MongoDB, Gemini API*

- Architected a real-time collaborative code-execution platform with WebSocket-based isolated multi-user rooms, MongoDB aggregation pipelines for live leaderboard ranking, and Gemini-API-generated DSA challenges.

EDUCATION

B.Tech in Computer Science & Engineering

Jul 2023 – Jun 2026

Sir Chhotu Ram Institute of Engineering and Technology, Meerut
