## Full Stack Developer (MERN + React Native)

### SUMMARY

Full Stack Developer with production experience across backend systems and cross-platform mobile apps. Built and shipped a fintech platform end-to-end — from a Node.js/MongoDB backend to a polished React Native app — with expertise in payment integrations, UI/animation systems, and Play Store deployment.

### TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript

**Frontend & Mobile:** React.js, Next.js, React Native (Expo), Redux Toolkit, Tailwind CSS

**Backend:** Node.js, Express.js, REST APIs, WebSockets, MongoDB, MySQL

**Integrations:** Razorpay, Setu BBPS, Fast2SMS, Cloudinary, Gemini API

**Security & Auth:** JWT, Helmet.js, Rate Limiting, CORS

**Tools & Deployment:** Git, GitHub, Postman, Vercel, AWS EC2, EAS / Play Console

### EXPERIENCE

#### Solar Capital — Software Development Engineer I (SDE-1)

Apr 2026 – Present

- Built and shipped a production React Native (Expo) app from scratch as sole mobile developer — owned the full Play Store lifecycle (AAB submission, release-track promotion, OTA updates via EAS).
- Designed a subscription lifecycle state machine and implemented Razorpay Subscriptions for monthly billing on solar reservation plans, backed by a dedicated charge ledger for accurate recurring-payment tracking.
- Implemented Razorpay webhooks for all platform payment events — orders, subscriptions, channel-partner payments, and Setu BBPS bill payments — with idempotency, MongoDB session-based transactions, and duplicate-event handling.
- Built a telemetry pipeline ingesting live device data from solar panel installations, aggregating it into graph-based dashboards for users and admins.
- Built a grid bonus rewards game with expiry logic; hardened APIs with rate limiting, token rotation, Helmet.js, CORS, and input validation.
- Improved performance via MongoDB indexing and aggregation pipelines, including a consolidated admin EMI ledger view.

#### Solar Capital — Backend Developer Intern

Jun 2025 – Mar 2026

- Designed and built the complete backend from scratch for a platform serving 2,000+ users — REST APIs for payments, subscriptions, rewards, and analytics.
- Built a solar project reservation flow using Razorpay Orders for payment collection, processing 500+ successful customer payments, and integrated Razorpay across channel-partner payment workflows.
- Integrated Setu BBPS for utility bill payments and rewards utilization, and built cron jobs to automate payment reconciliation and daily reward allocation for 250+ subscribers based on their allotted solar reservations.
- Built production-grade OTP authentication (Fast2SMS) with token rotation, and integrated Cloudinary for user document uploads with server-side signature validation.
- Developed user-facing dashboards for subscription management, rewards tracking, and account insights.

### PROJECTS

#### NextStep — AI-Powered Roadmap Generator | React.js, Node.js, Express, MongoDB, D3.js, Gemini API, Firebase

- Built a full-stack app that uses Gemini AI to generate personalized learning roadmaps, with REST APIs for progress tracking and Firebase Auth/Firestore for session management.

#### CodeionX — Real-Time Collaborative Coding Platform | Next.js, Node.js, Express, WebSockets, MongoDB, Gemini API

- Built real-time collaborative code editing with WebSockets and isolated rooms; used MongoDB aggregation pipelines for live leaderboards and Gemini API to generate DSA challenges.

### EDUCATION

#### B.Tech in Computer Science & Engineering

Jul 2023 – Jun 2026

Sir Chhotu Ram Institute of Engineering and Technology, Meerut
