Software Engineer

SUMMARY

Full-stack Software Engineer (MERN) with production experience owning features end-to-end — from system design through implementation, deployment, and debugging — across a TypeScript/Node.js backend, Next.js web, and React Native mobile in a fast-moving fintech environment.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript

Backend & System Design: Node.js, Express.js, REST APIs, WebSockets, system design, API architecture, third-party API integration

Databases: MongoDB, Firebase Firestore, MySQL

Frontend & Mobile: React.js, Next.js, React Native, Tailwind CSS, MERN Stack

Payments & Integrations: Razorpay, Setu BBPS, Cloudinary, Fast2SMS, Gemini API

Caching & Scheduling: Redis, Node-Cron

Testing & QA: Postman, manual UI and end-to-end regression testing

Systems & Tools: Linux, Git, GitHub, Fly.io, Vercel, EAS, Play Console

EXPERIENCE

Software Development Engineer I (SDE-1) — Solar Capital

Apr 2026 – Present

- Designed and implemented the platform's recurring-payment architecture using Razorpay Subscriptions, covering subscription lifecycle management, webhook-driven state transitions, payment-failure handling, and reconciliation for the monthly-payment model.
- Diagnosed and resolved a production job-scheduling issue on our cloud hosting platform that was causing background cron jobs to miss their scheduled runs, restoring reliable execution of time-based backend tasks.
- Designed and implemented a gamified rewards engine to boost subscriber engagement and retention.
- Built automated background jobs using node-cron for cleanup of stale subscription and bill payments, daily reward allocation to subscribers, and subscription lifecycle processing, removing manual intervention from recurring financial workflows.
- Optimized the daily reward-allocation cron job, reducing average processing time from 2 minutes to 12 seconds.
- Implemented API security middleware including rate limiting, centralized input validation, JWT/token verification, Helmet.js security headers, and CORS configuration; participated in regular GitHub code reviews to maintain code quality.
- Initiated and began building the platform's React Native mobile app end-to-end, covering architecture setup, core screens, and integration with existing backend APIs.

Backend Developer Intern — Solar Capital

Jun 2025 – Mar 2026

- Built the initial backend foundation for a platform serving 2,000+ users, covering solar-capacity reservations, payment processing, user dashboards, rewards, analytics, and administrative workflows.
- Built the authentication and user-account foundation, including Redis-backed OTP login, token management, protected APIs, and the subscription/rewards services consumed by the application.
- Implemented the complete solar-reservation payment workflow with Razorpay, including order creation, payment verification, booking-state updates, and failure handling; processed 500+ successful payments.
- Integrated Setu BBPS into the platform's bill-payment workflow, including provider communication, webhook handling, reconciliation, and scheduled processing for 250+ subscribers.
- Validated API correctness and edge-case behavior using Postman, and performed manual UI and end-to-end testing to catch regressions before release; wrote and ran MongoDB migration and data-cleanup scripts for schema changes.

PROJECTS

NextStep — AI-Powered Career Roadmap Platform ([Live Demo](#)) — *React.js, Node.js, Express, MongoDB, D3.js, Gemini API (LLM), Firebase*

- Designed a full-stack AI-powered roadmap-generation platform, using an LLM (Google Gemini API) to convert user inputs into personalized learning paths; built stateful progress-tracking REST APIs with Firebase Auth/Firestore-backed session persistence.

CodeionX — Real-Time Collaborative Coding Platform ([Live Demo](#)) — *Next.js, Node.js, Express, WebSockets, MongoDB, Gemini API (LLM)*

- Architected a real-time collaborative code-execution platform with WebSocket-based isolated multi-user rooms, MongoDB aggregation pipelines for live leaderboard ranking, and LLM-generated (Gemini API) DSA challenges.

EDUCATION

B.Tech in Computer Science & Engineering

Jul 2023 – Jun 2026

Sir Chhotu Ram Institute of Engineering and Technology, Meerut
